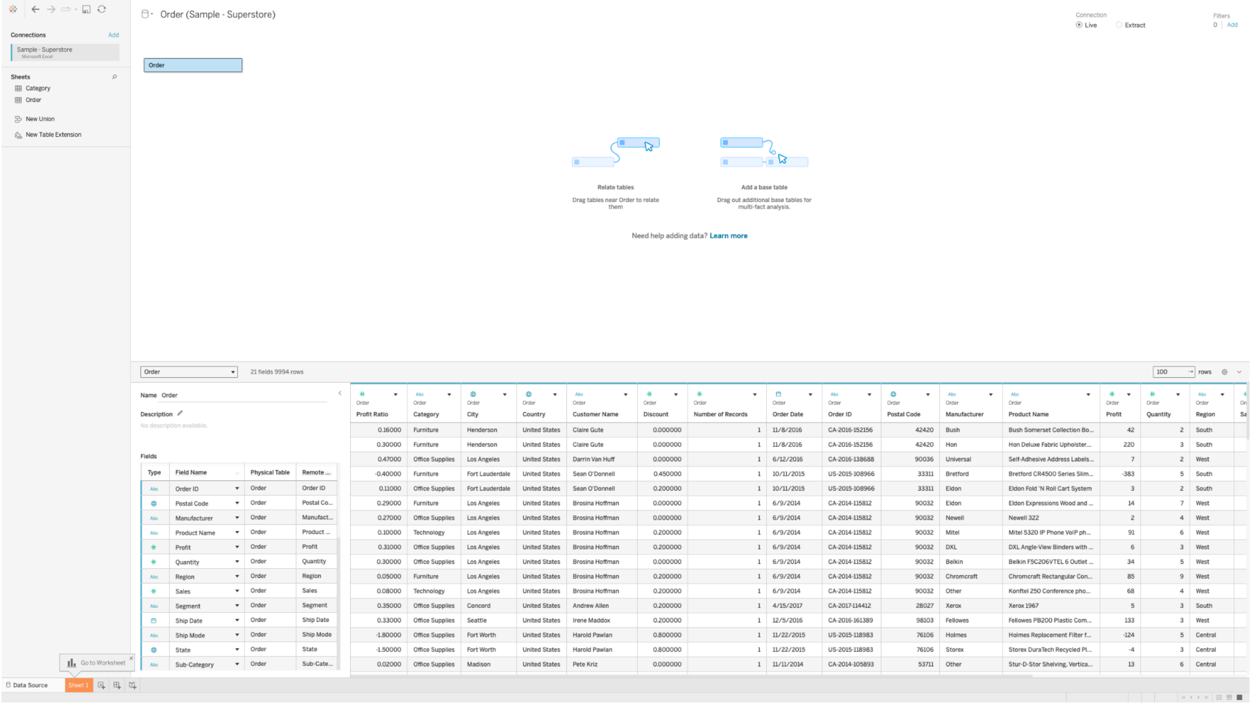
Lab 2: Tableau Basic Functions:

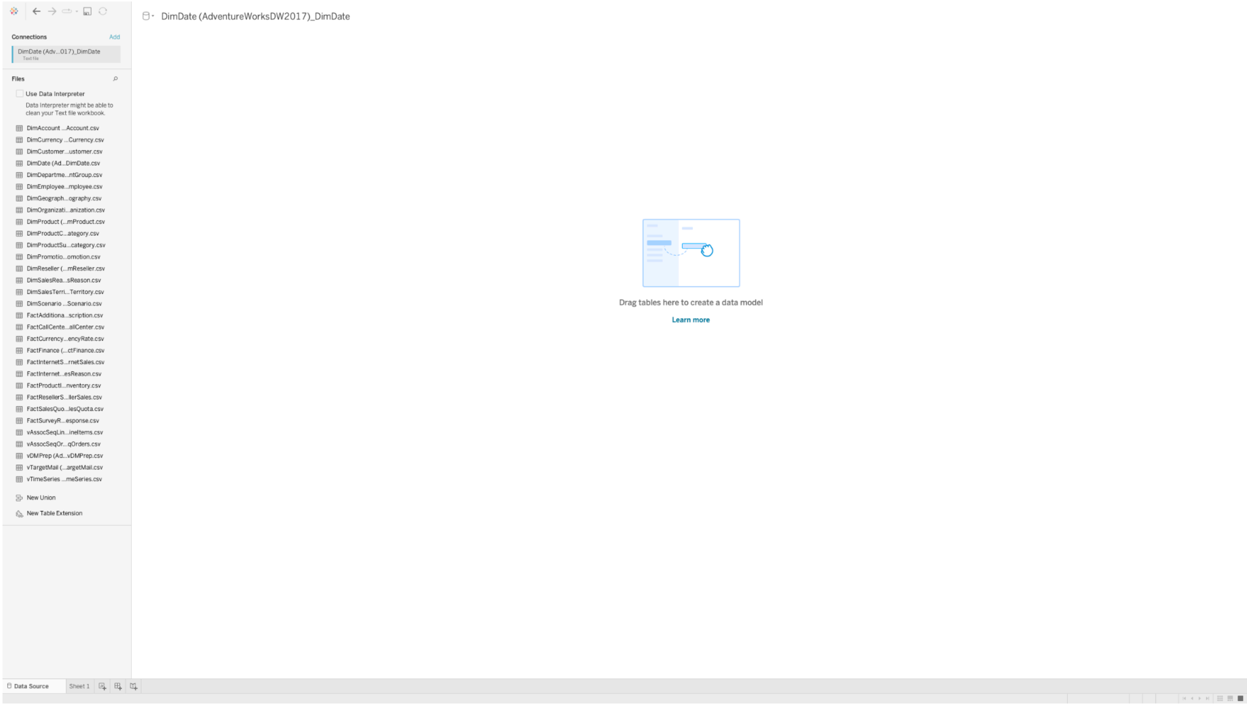
Name: Gopi Krishna Reddy Katkuri

1. Connect tableau to the data:

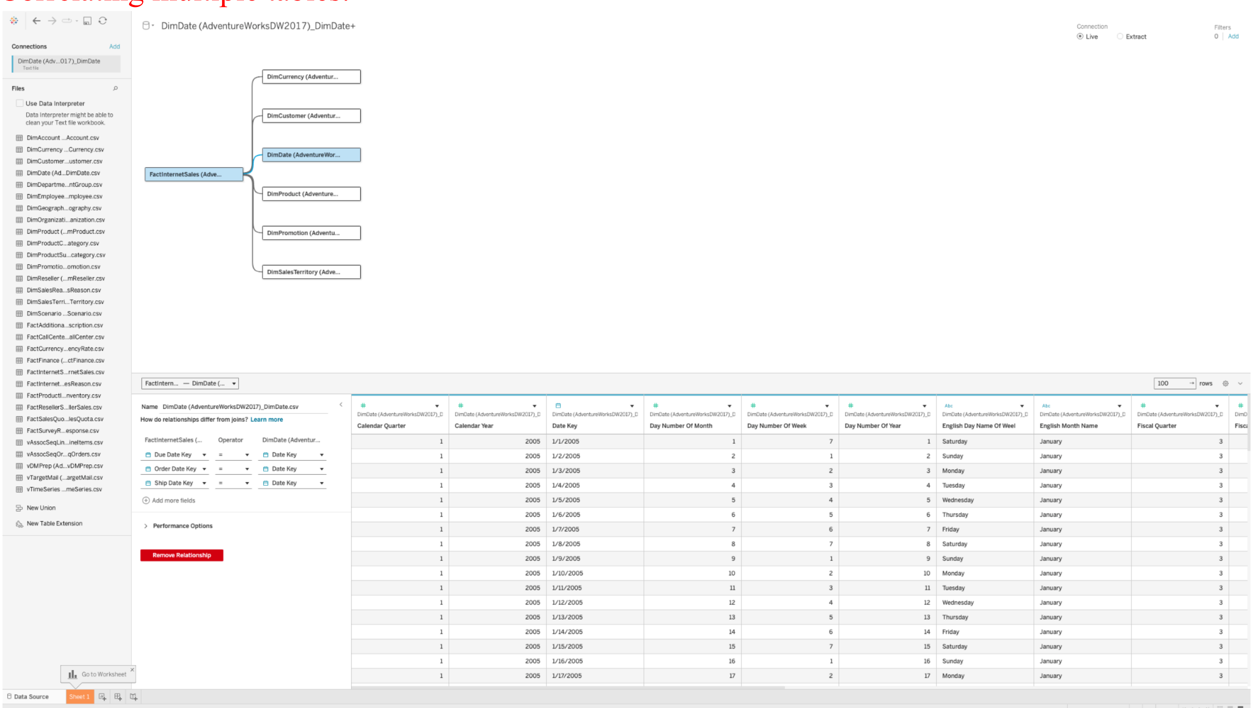
(1). To a single excel file.



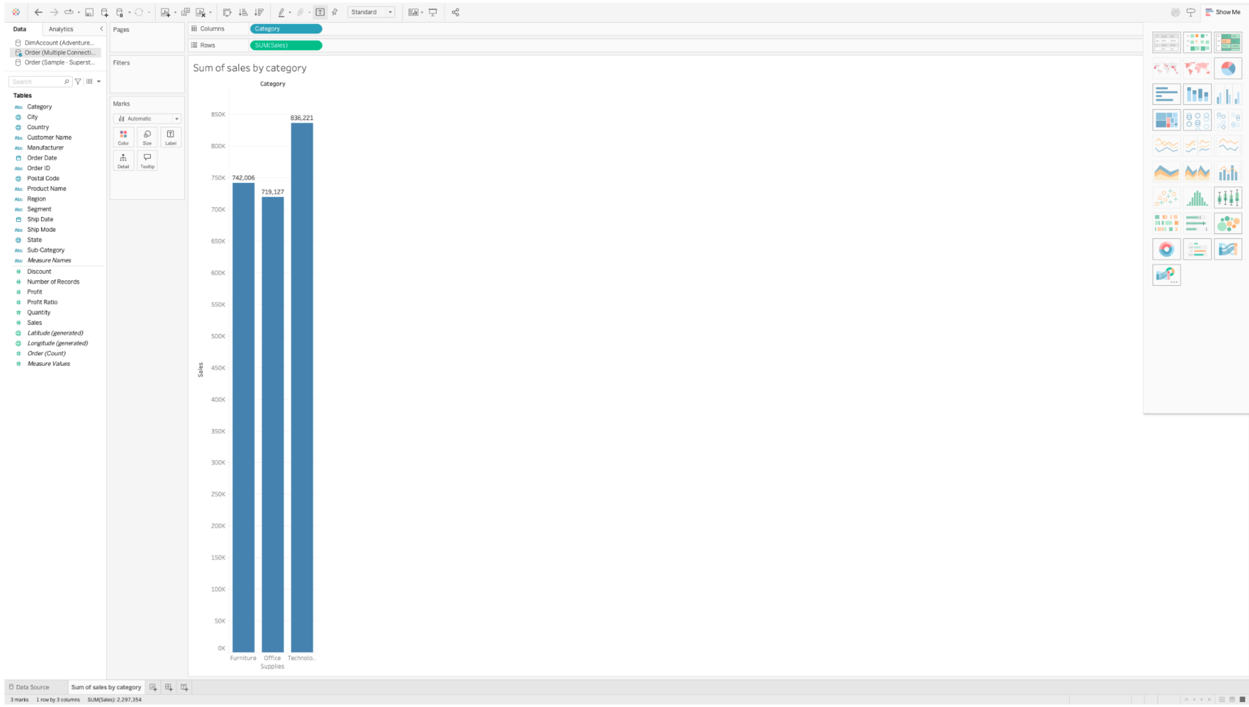
(2). To multiple files.



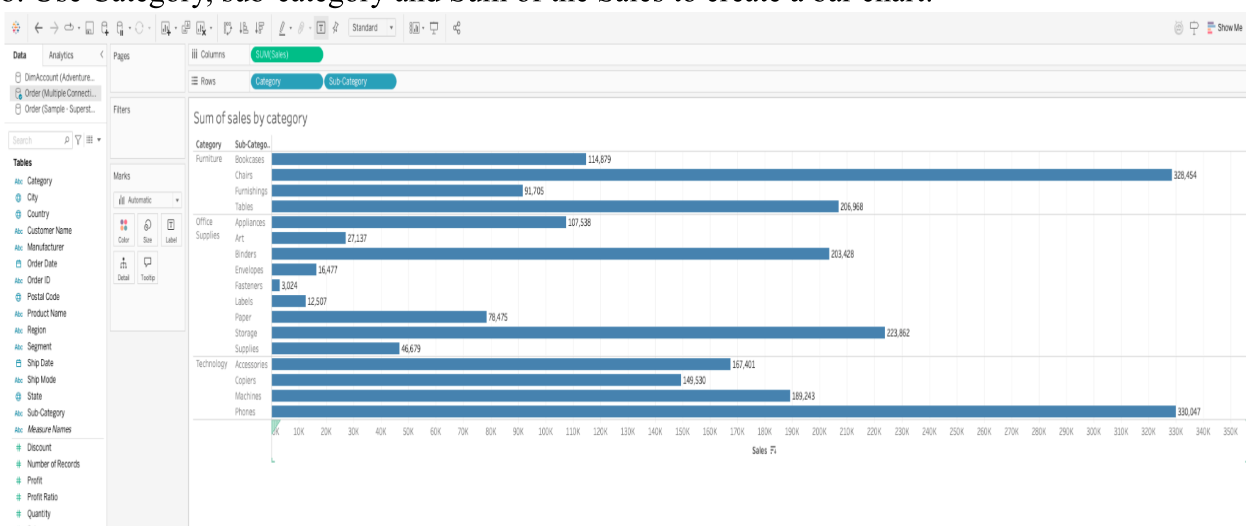
Correlating multiple tables:



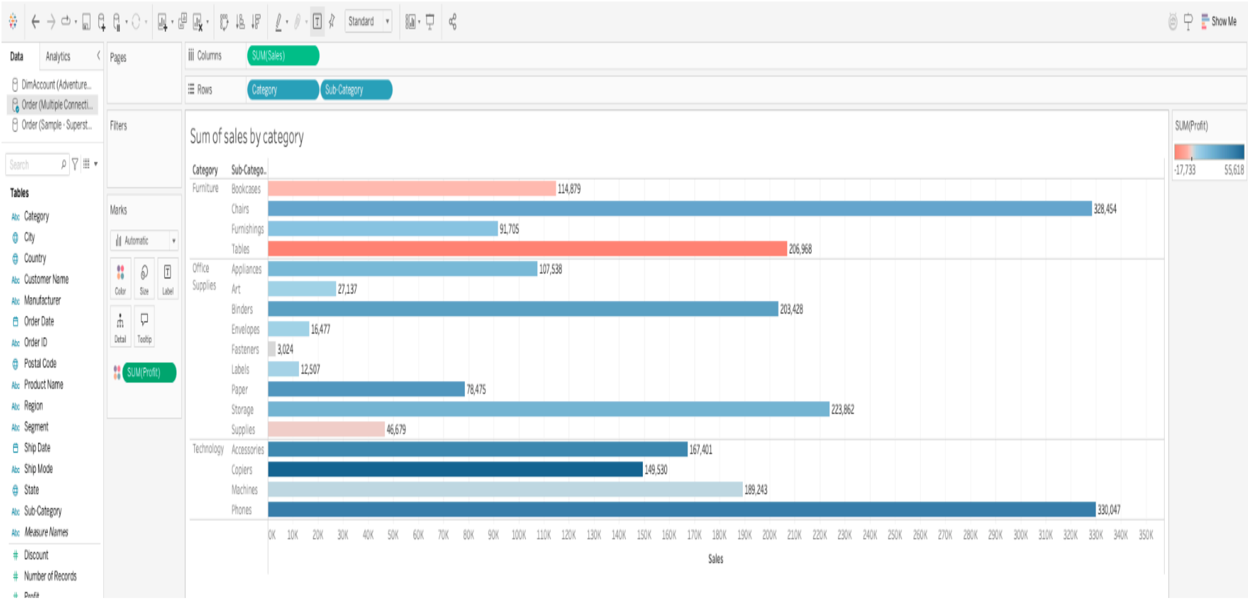
2. Analyze data in the View:
(1). create bar/column charts;
a. Use Category and Sum of the Sales to create a column chart:



b. Use Category, sub-category and Sum of the Sales to create a bar chart:

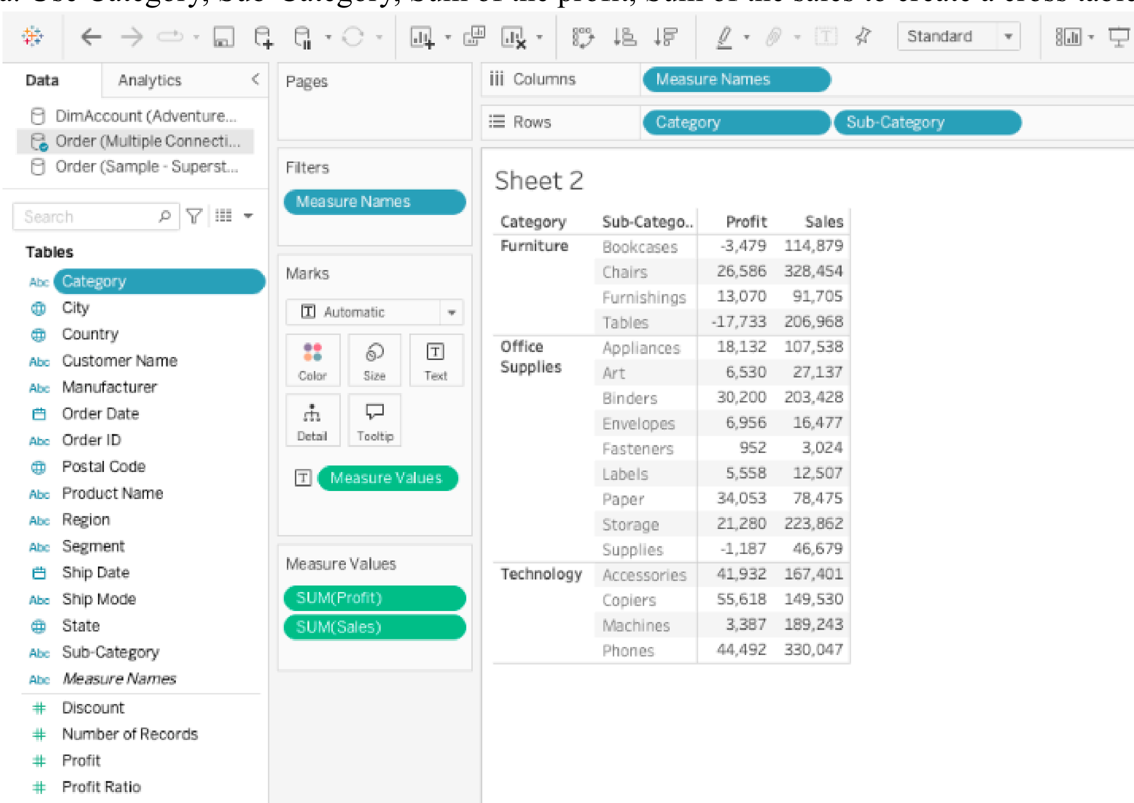


(2). Use additional Measurements (Sum of the Profit) for color comparison:ff

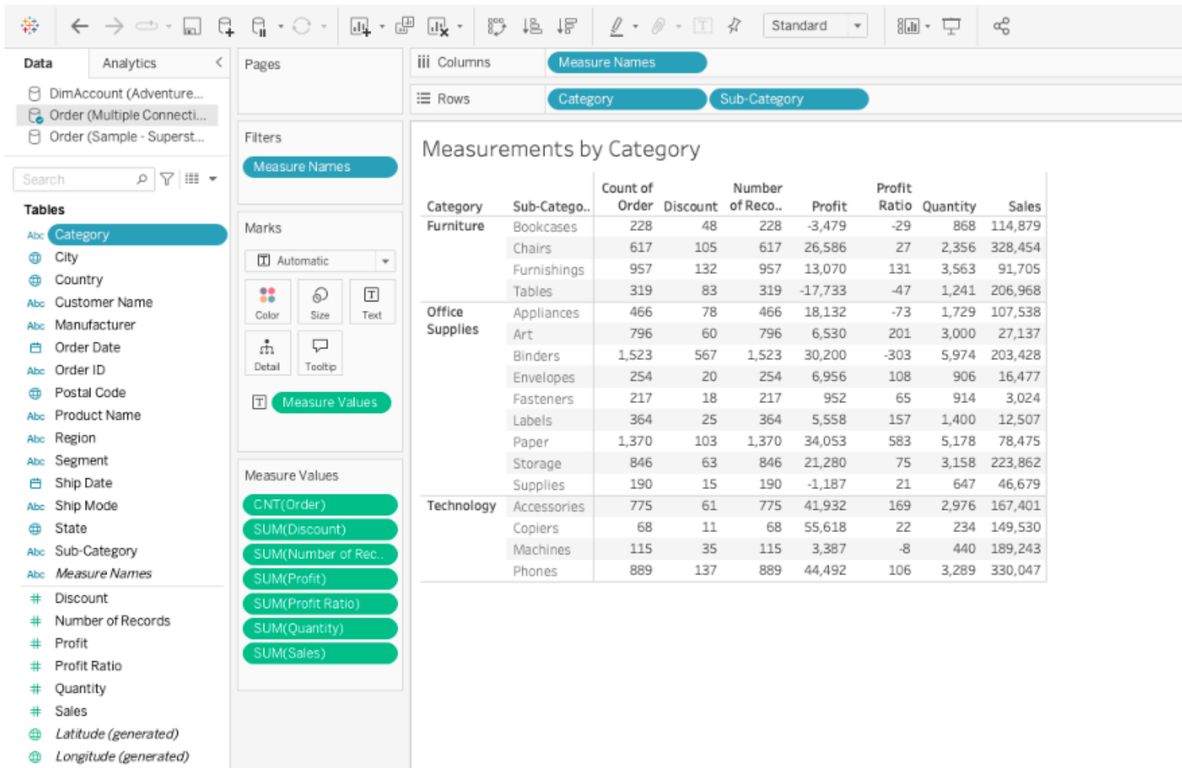


(3). Create cross tables:

a. Use Category, Sub-Category, Sum of the profit, Sum of the sales to create a cross table;

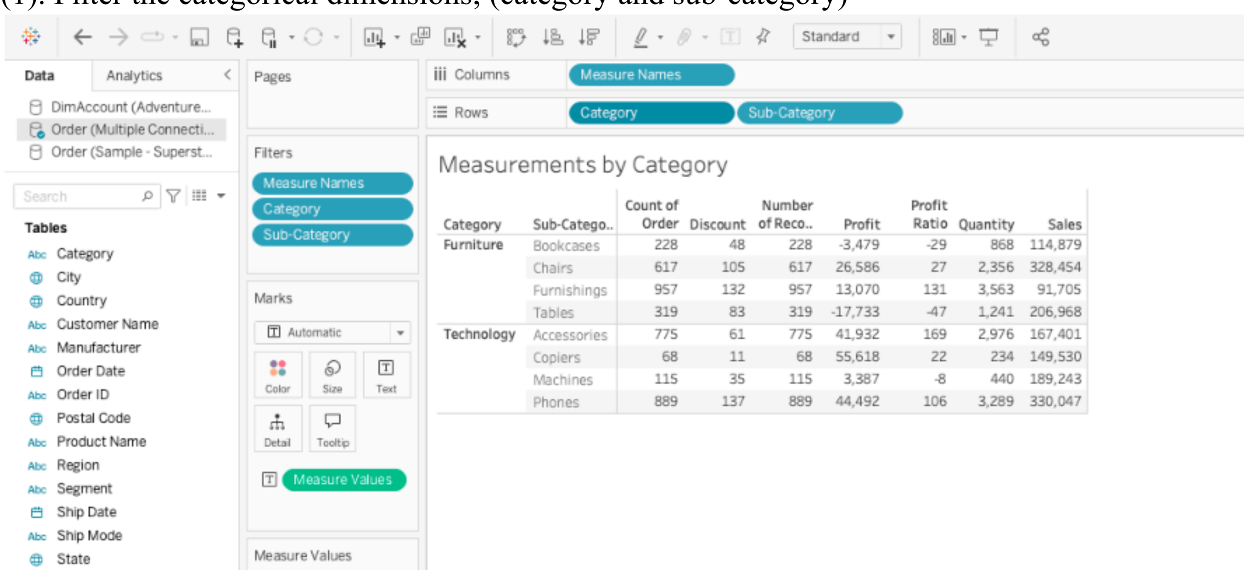


b. Use Sum of all the measurements, Category, and Sub-Category to create a cross table:

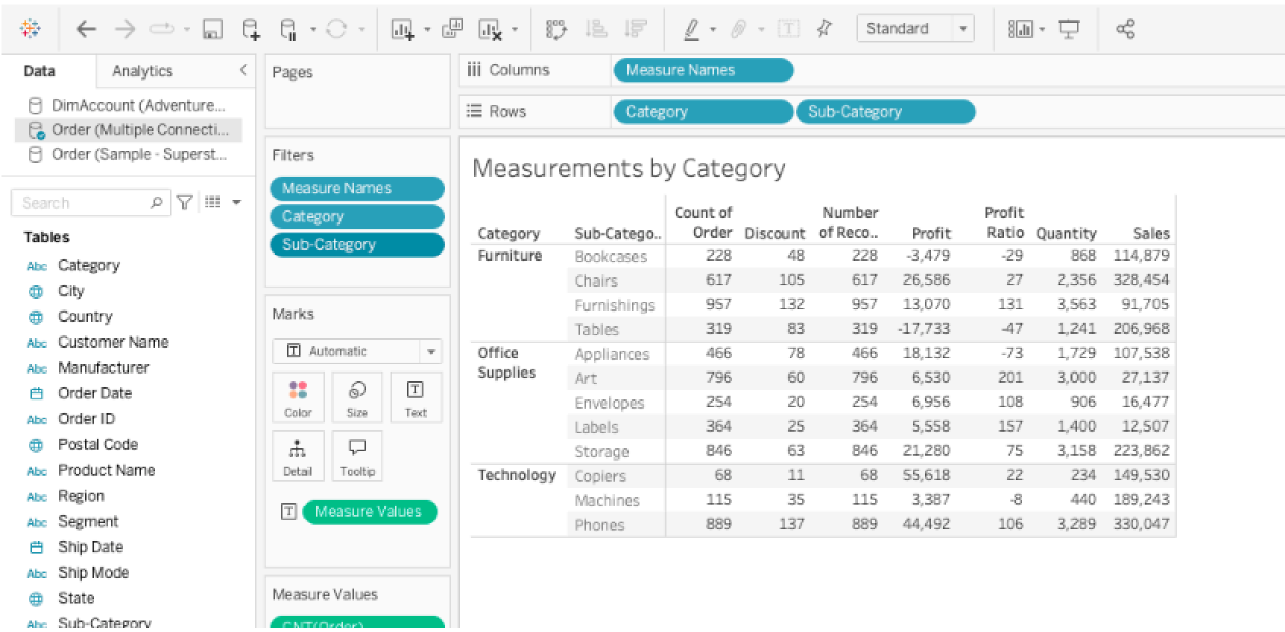


3. Filter the Data:

(1). Filter the categorical dimensions; (category and sub-category)

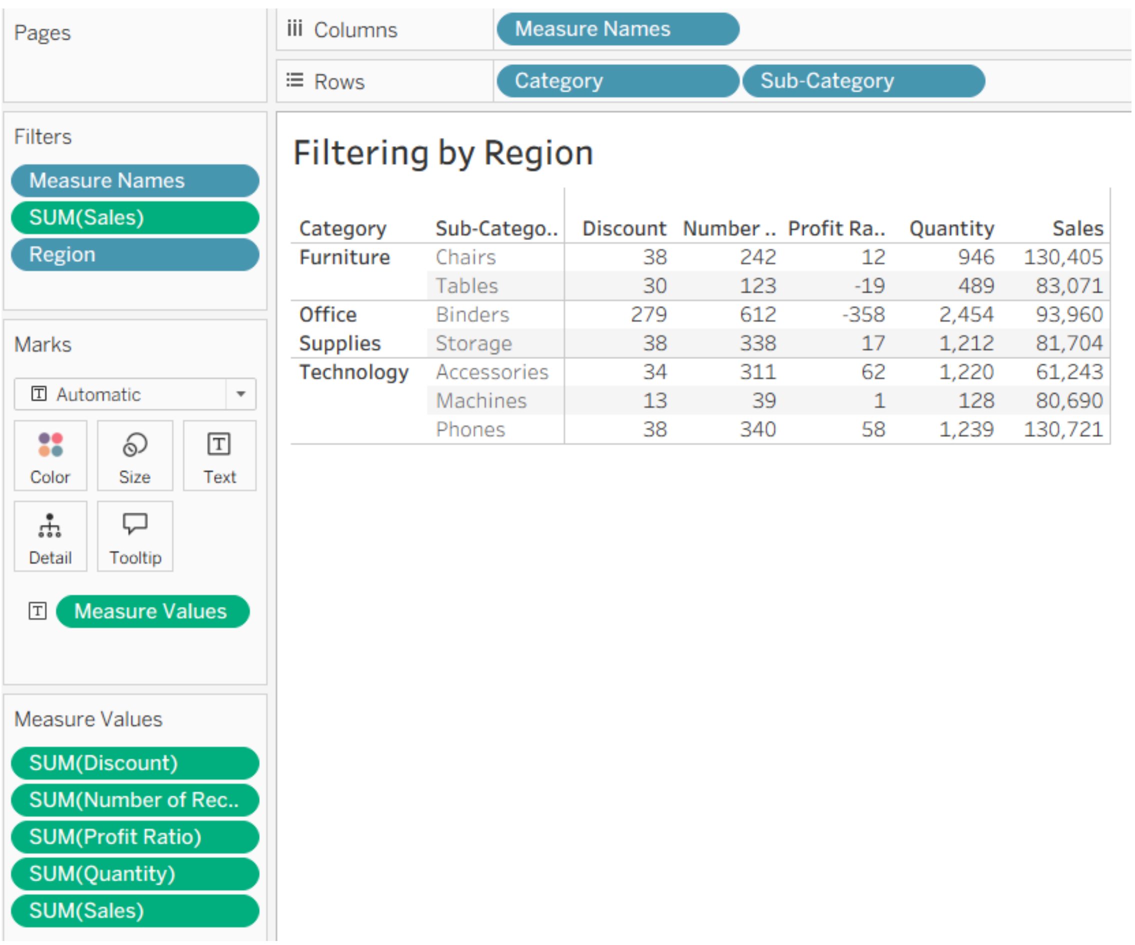


(2). Filter the measurements;



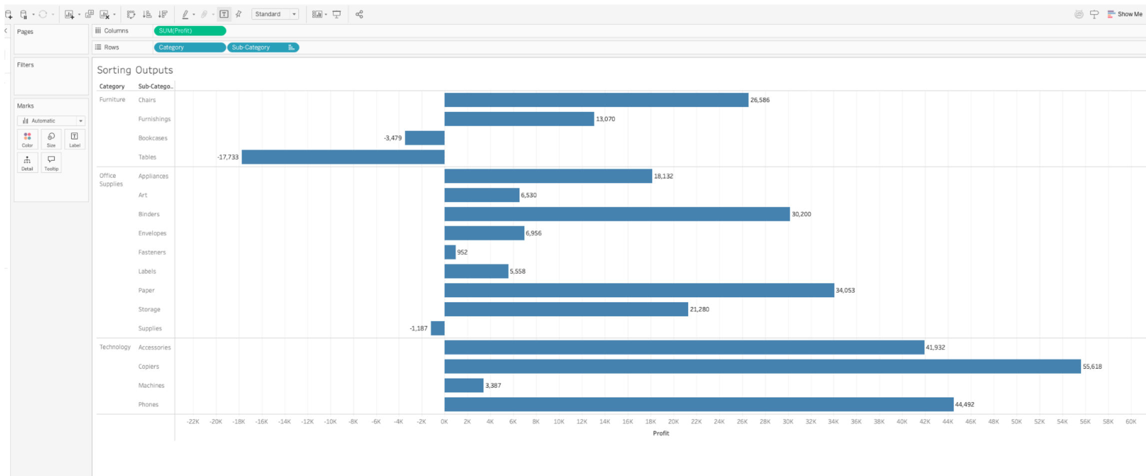
Category	Sub-Catego..	Count of Order	Discount	Number of Reco..	Profit	Profit Ratio	Quantity	Sales
Furniture	Bookcases	228	48	228	-3,479	-29	868	114,879
	Chairs	617	105	617	26,586	27	2,356	328,454
	Furnishings	957	132	957	13,070	131	3,563	91,705
	Tables	319	83	319	-17,733	-47	1,241	206,968
Office Supplies	Appliances	466	78	466	18,132	-73	1,729	107,538
	Art	796	60	796	6,530	201	3,000	27,137
	Envelopes	254	20	254	6,956	108	906	16,477
	Labels	364	25	364	5,558	157	1,400	12,507
	Storage	846	63	846	21,280	75	3,158	223,862
Technology	Copiers	68	11	68	55,618	22	234	149,530
	Machines	115	35	115	3,387	-8	440	189,243
	Phones	889	137	889	44,492	106	3,289	330,047

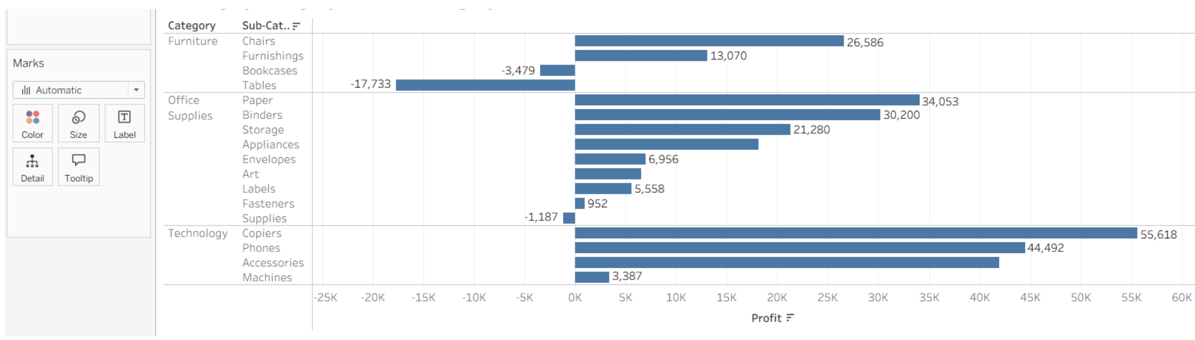
(3). Use Region as the additional Filter option on the side;



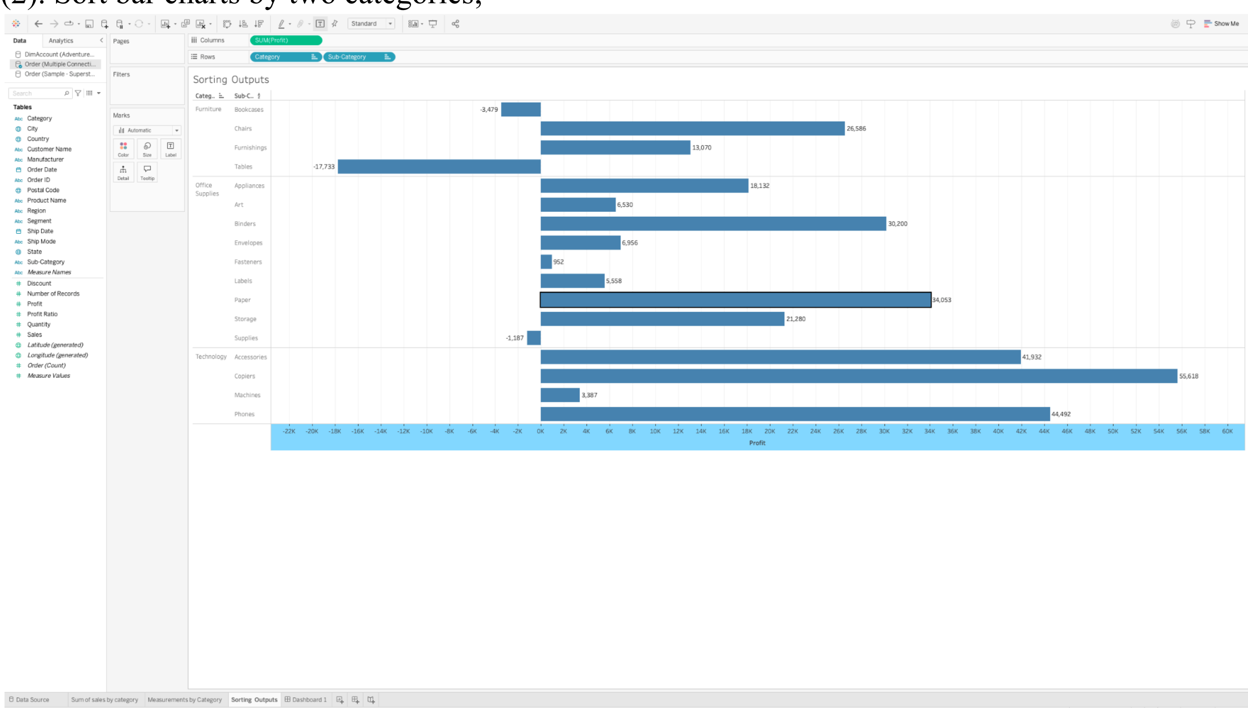
Category	Sub-Catego..	Discount	Number ..	Profit Ra..	Quantity	Sales
Furniture	Chairs	38	242	12	946	130,405
	Tables	30	123	-19	489	83,071
Office Supplies	Binders	279	612	-358	2,454	93,960
	Storage	38	338	17	1,212	81,704
Technology	Accessories	34	311	62	1,220	61,243
	Machines	13	39	1	128	80,690
	Phones	38	340	58	1,239	130,721

4. Computed Sort and Manual Sort;
(1). Sort bar charts by values;

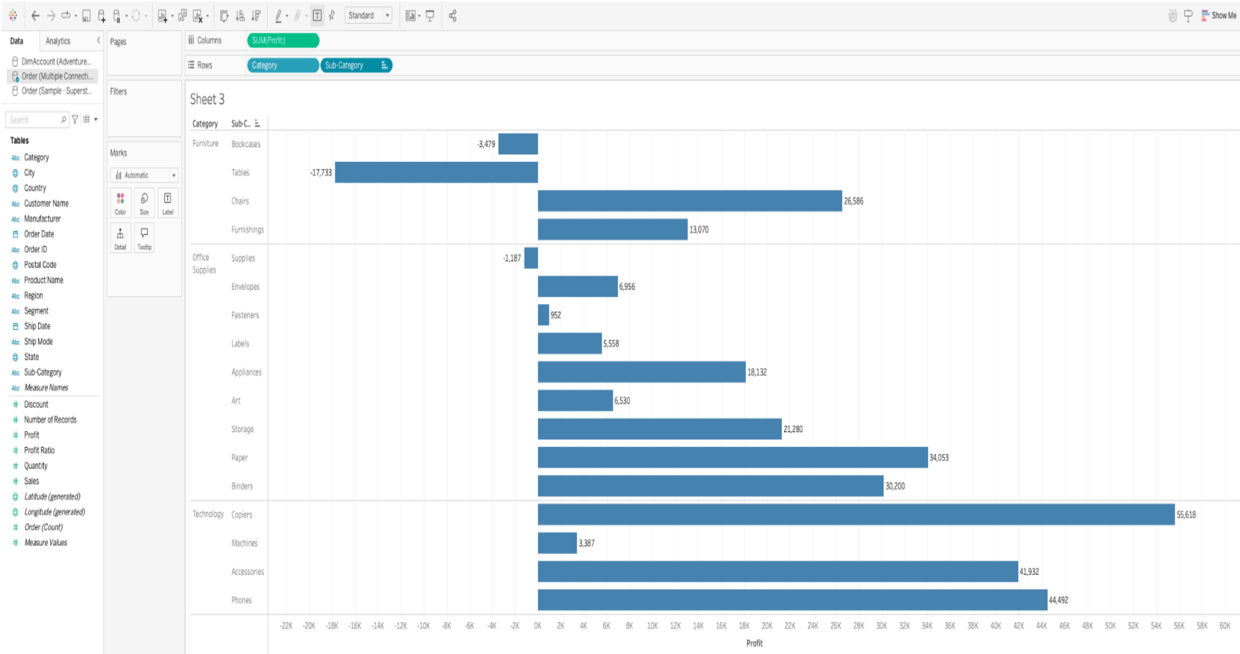




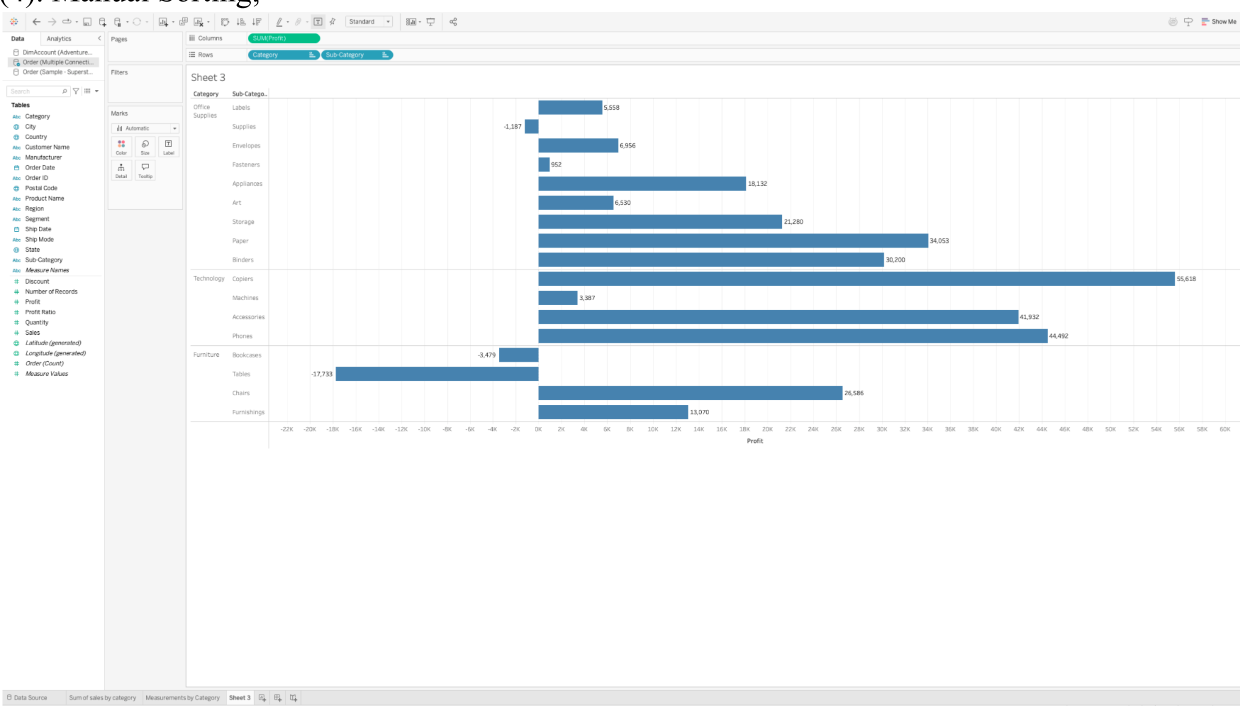
(2). Sort bar charts by two categories;



(3). Add additional criteria (Sum of quantity) to the existing sorting;

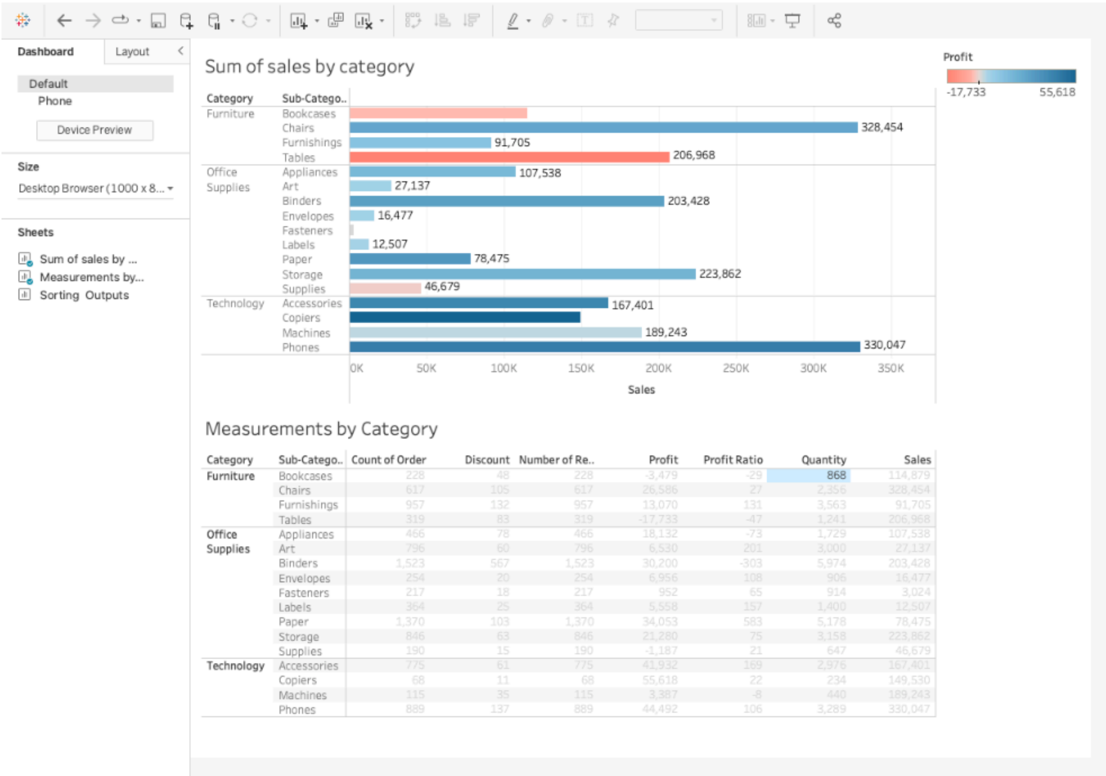


(4). Manual Sorting;

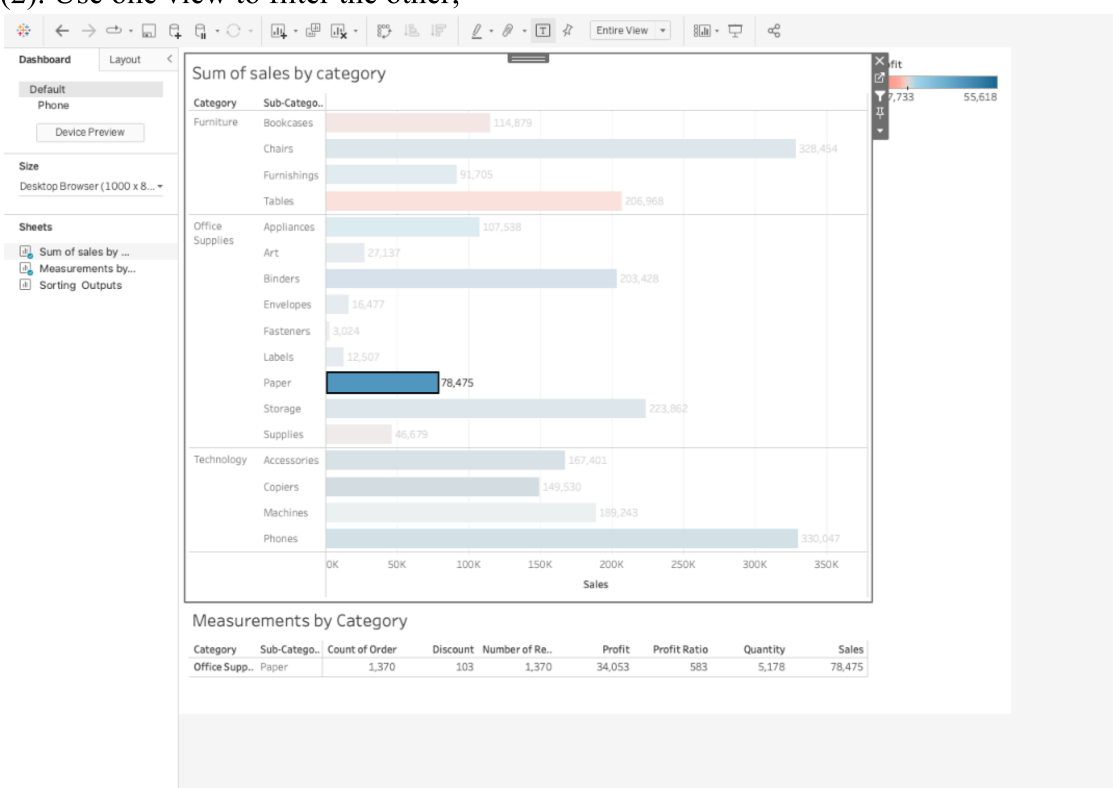


5. Share the views in the dashboard:

(1). Insert views into the dashboard;

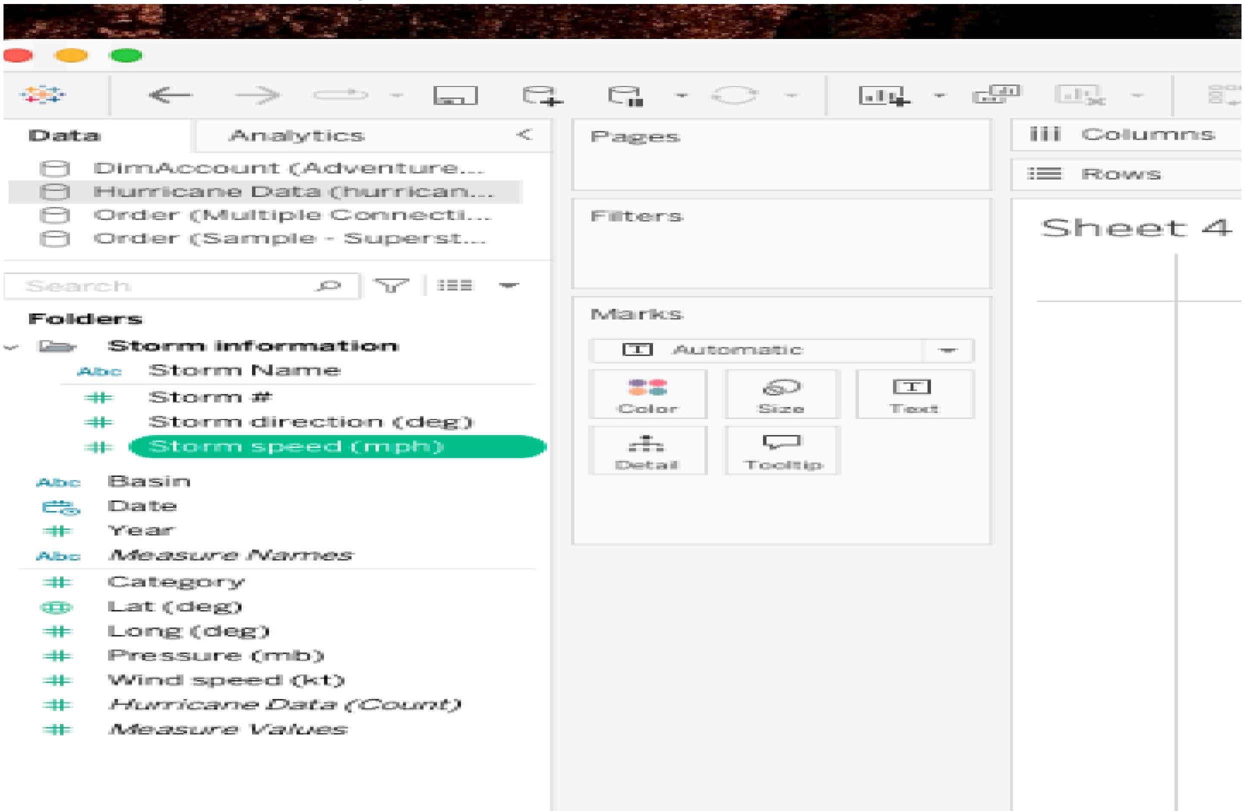


(2). Use one view to filter the other;

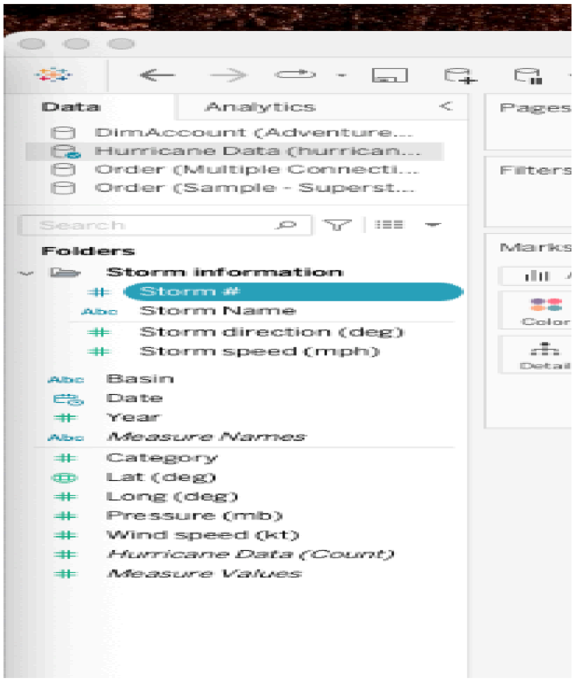


(3). Share and save the dashboard file;

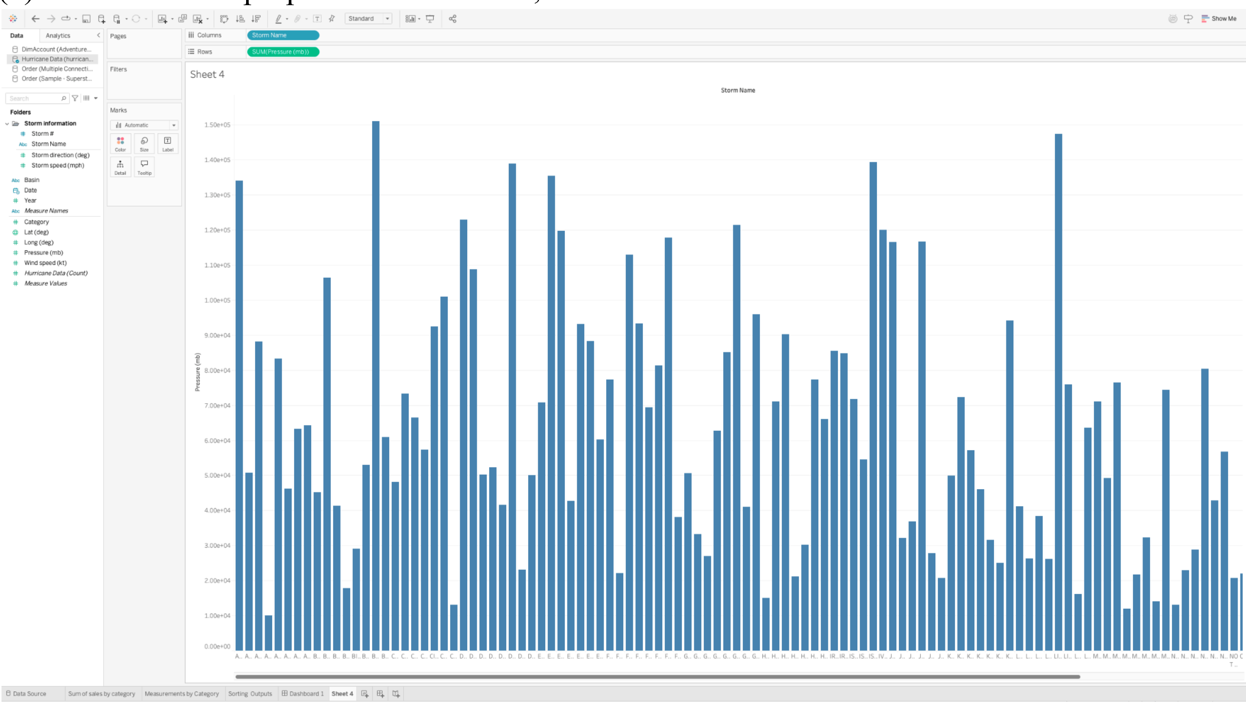
6. Edit and Save a Data Source:
Use the hurricane.xlsx;
(1). Create a folder and assign fields to the folder;



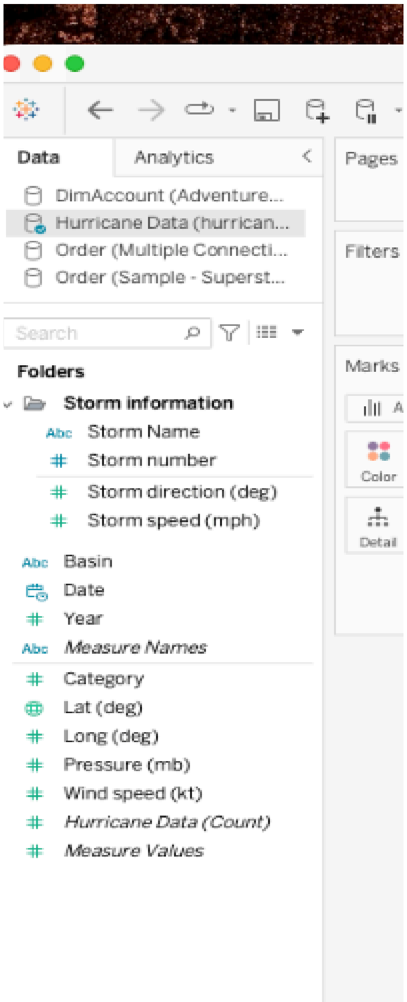
(2). Change dimension to measures, or change measures to dimension (storm #):



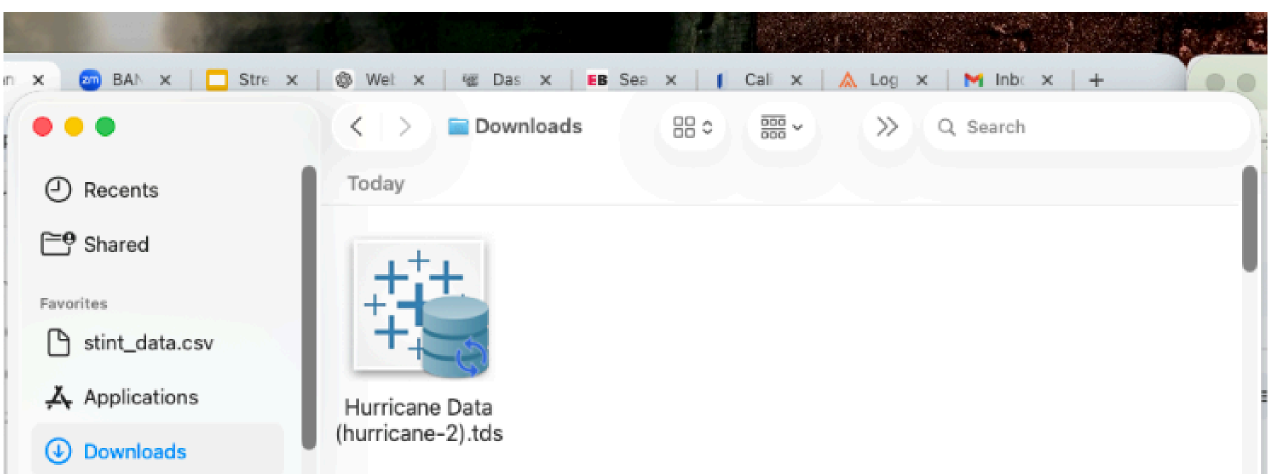
(3). Set the default properties of the fields;



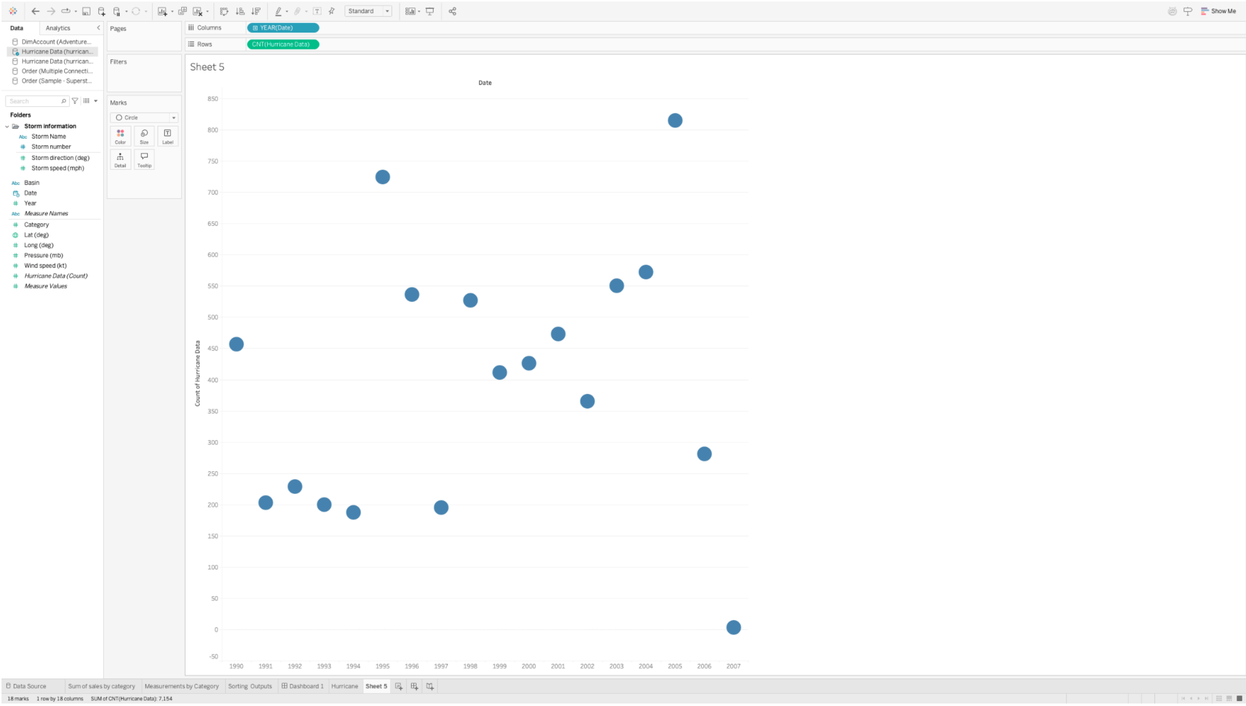
(4). Rename a field;



(5). Save the data source locally or to the server;

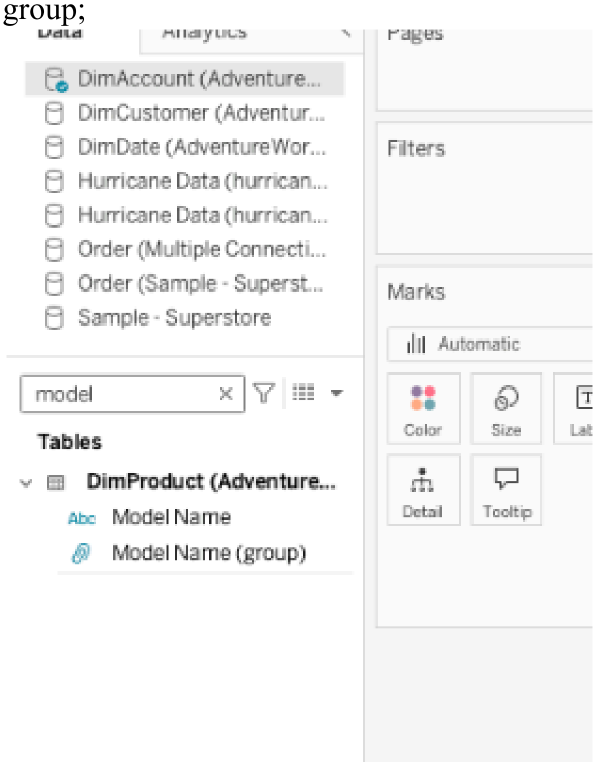


7. Update the View with New Data:
(1). Live connection;
(2). Automatically change the views by changing data;



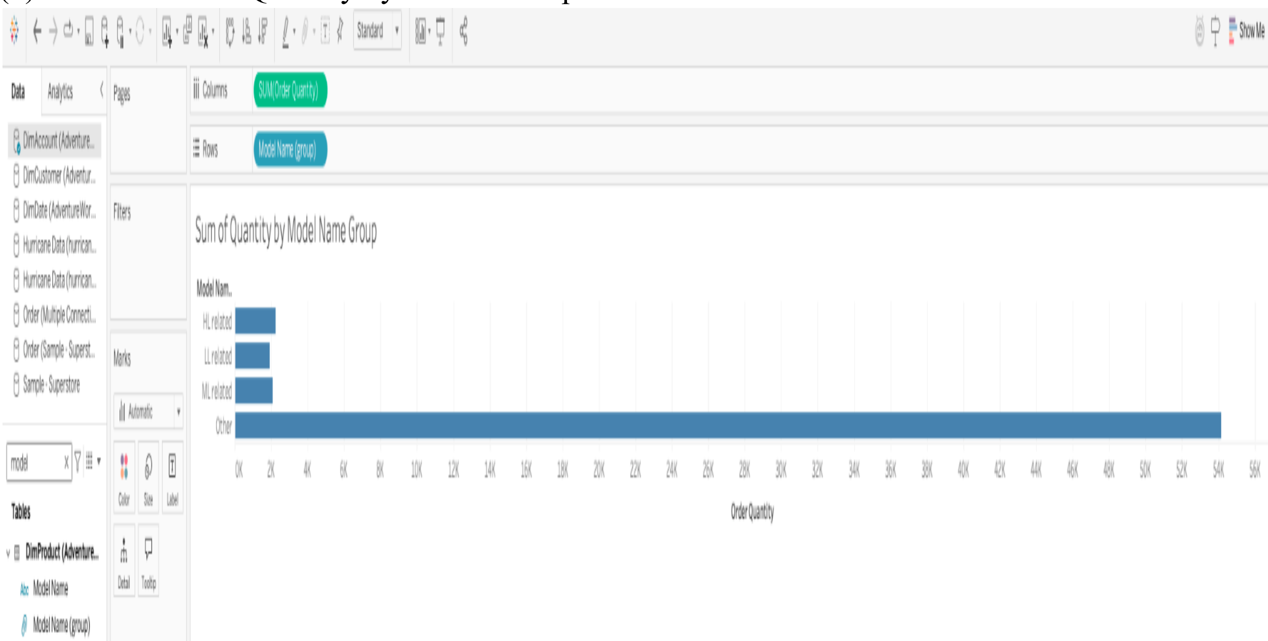
(3). Structure change won't be applied to the views directly;

8. Use Groups to organize Data:
(1). Use Group to categorize Product "Model Name"; Use rename to change the name of the group;

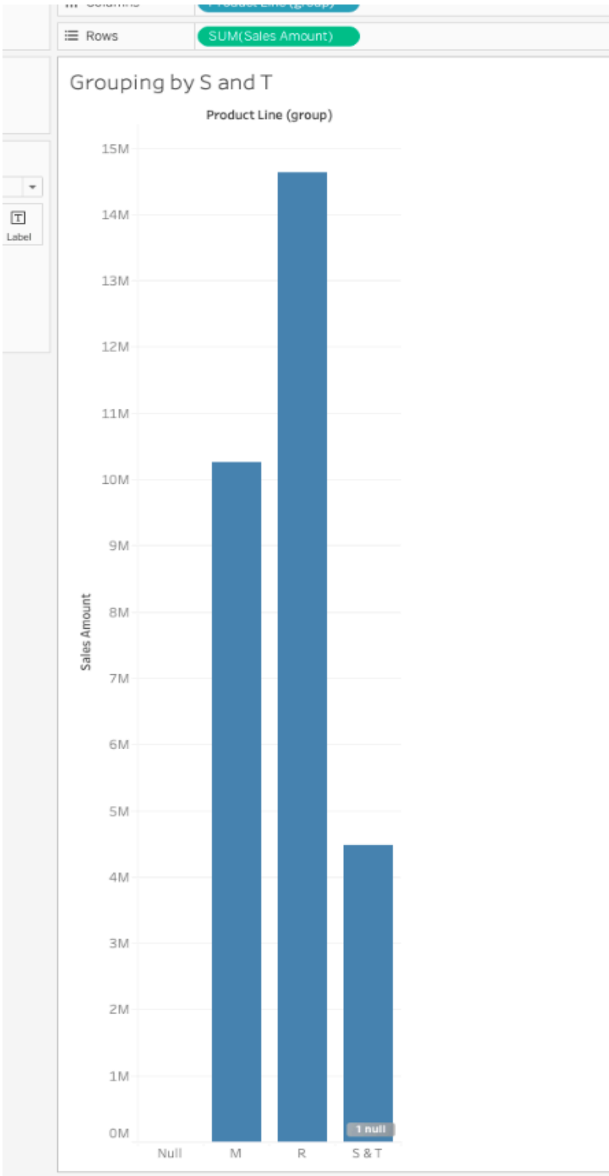


(2). Use Find to discover the keywords for categorization; Use the other to include the remaining items into one group;

(3). Model Sum of Quantity by Model Groups:



(4). Group the items in the View by labels (Use product line and sum of the sales amount):



(5). Compare different groups using bars by different colors (use Size, sum of order quantity):

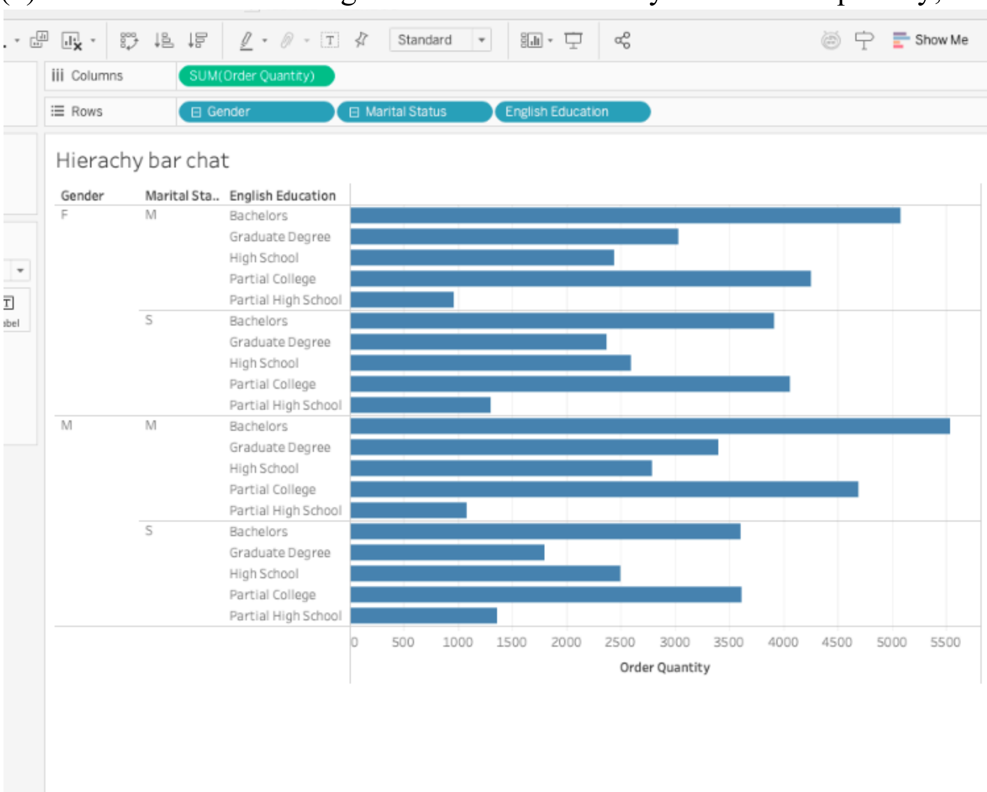
9. Use Hierarchy to organize data:

(1). Create hierarchy using Customer Information;

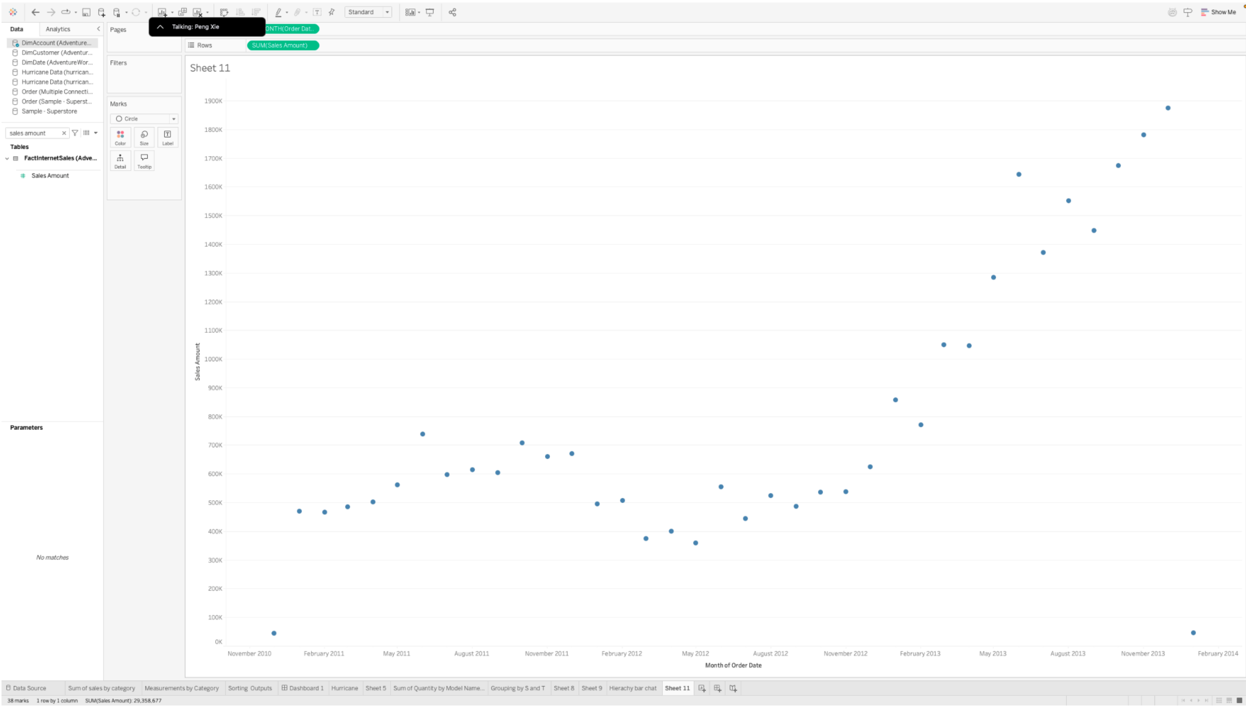
(2). Create a bar chart using the Customer hierarchy and Sum of quantity;



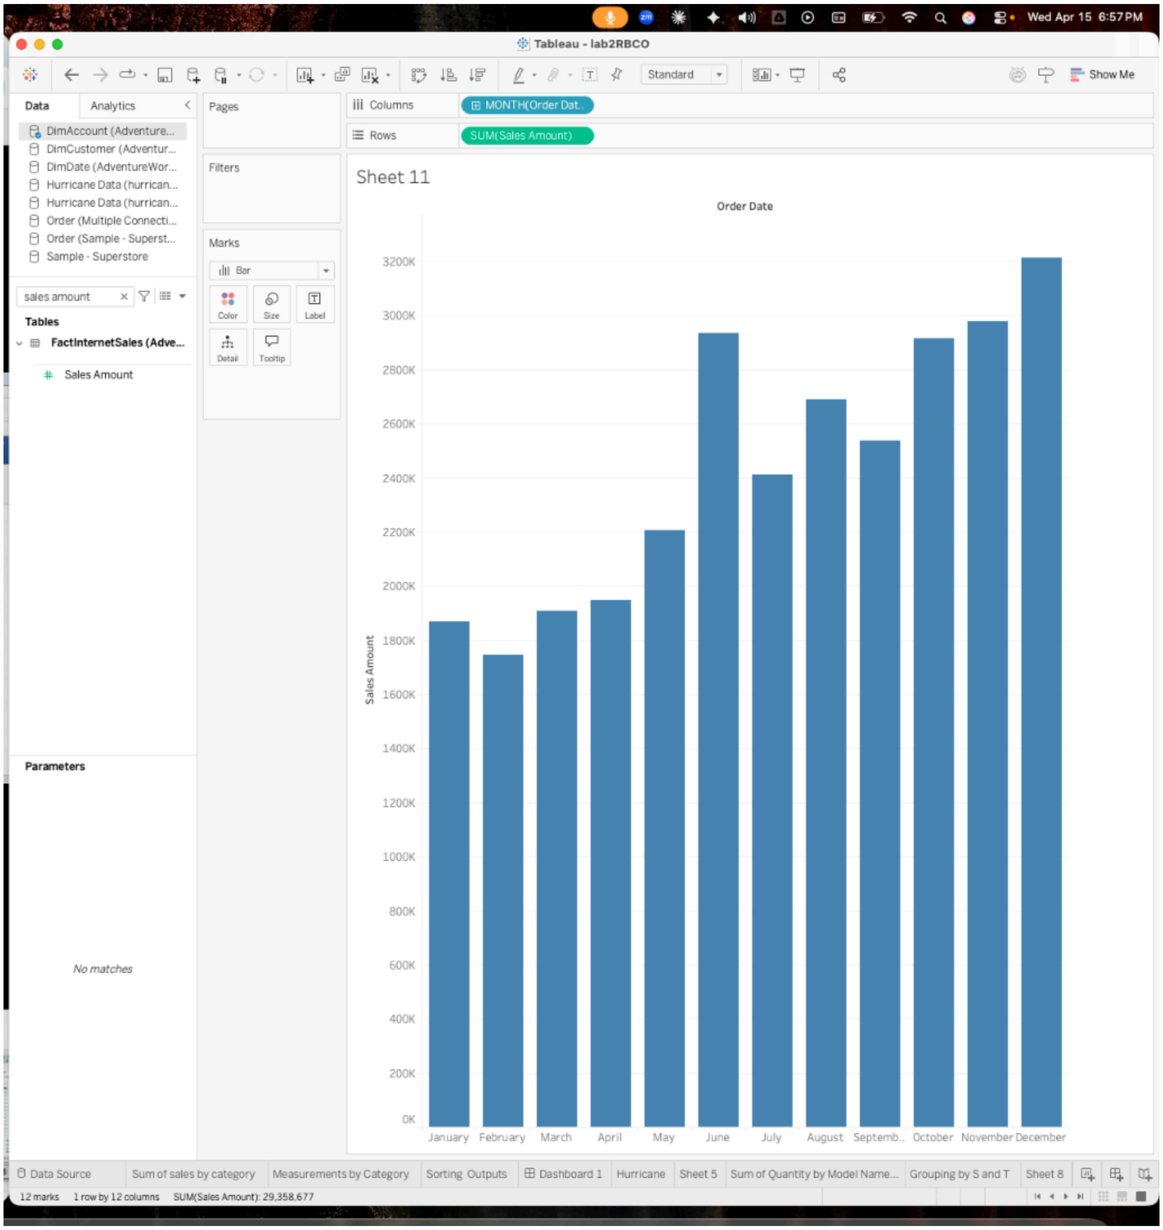
10. Working with Discrete and Continuous Date Fields:

(1). Use continuous date field, when you want to view data over time; See the sum of the sales amount of months over year;

We can observe the sum of sales changes or trends across different year from different month



(2). Use discrete date field, when you want to view data comparison amongst categories (e.g. month); See the sum of the sales amount of months from different years;



(3). Use different hierarchies and combinations of the date;
